GPRO VALVE SDN BHD

GPRO VALVE SDN BHD

The Manufacturer of Malaysia AUT Valves and Water Meters

As the Malaysia's leading smart water metering system provider , we have developed a comprehensive smart metering system range for the Domestic, Commercial, Agriculture and Industrial areas . Moving with the changes in IOT technology and higher precision metering, we are adding more research cost on reduce NRW (Non-Revenue water), achieving the high-efficiency using on water

Today, we have many partners from all over the world with long time cooperation. Since 2017, to provide better services, we have started to go abroad, investigate local water metering markets, start some pilot projects and visit our regular and new customers .

We will never forget the mission from GPRO " To be the leader for water metering system in abroad market". In future, we will do more in water saving, precision metering and intelligent control of water management.

Mission

Accurately measure every drop of water's value

Vision

Be the leader of water metering industry in oversea market

Values

Sincerity, altruism, innovation

WHY CHOOSE US

Professional R & D team supports the customization request including the meters parts, various signal output, the data management system and charge system.
The aim is to achieve the water meter ing system localization .

We have a strict quality management system, and experienced technical engineers are in charge of production and calibration, so as to ensure the quality of each water meter before delivery.
Each order provides the test result and inspection report of each water meter.

About the delivery ability side , we have stable stock to guarantee fast delivery. For sample and trial order, we have the special production line to make sure the fast delivery.

Our fund is guaranteed, the payment method is flexible.

we are building the complete after-sell services station in overseas markets As to the after-sales service system, and looking for more local partners can start the cooperation with us.

FOR CONTRACTOR

1. Investigate the actual installation site, such as water meter installation location, length requirements, signal laying, anti freezing, anti magnetic interference and other requirements.
2. Customization of the development of billing software and water meters can be supported according to the actual project needs.
3. According to the project budget, various solutions such as mechanical meters, ultrasonic water meters and various intelligent remote water meters can be provided.
4. The water meter conform international standards and certificates, and can meet the requirements of the municipal water department.
5. Assist in pilot, sample test and installation.
6. Various flexible payment methods can be selected.
7. Large raw material inventory and fast delivery time.
8. The warranty period can be extended according to the requirements of the water department.
9. Key customers and markets can be supported localized service teams to satisfy more efficient and direct on-site service requirements.

FOR MANUFACTURERS

1. Long term and exclusive cooperation agreements can be signed to protect the local manufacturer market.
2. We can help customers fully realize the needs of localized assembly by providing equipment, technology and accessories, training, etc.
3. Assist manufacturers to develop water meters, software and billing systems suitable for the local market needs.
4. Assist in application of the localization certification.
5. Cooperative bidding.
6. Jointly participate in local exhibitions and assist in market development.

SOLUTION

FOR PUBLIC UTILITY

1. Through market research, we can understand the main problem for the current leakages and which is be solved urgently, such as basic measurement, charge management or main pipeline leakage.
2. Investigate the local water quality, water pipenetwork, network signal coverage, local residents' payment habits, managers' charging logic, etc., to design and develop water meters, networks and charging systems suitable for the local market.
3. Assist in pilot, sample test and installation for water metering system.
4. Support localized factory building, assembly, calibration and production according to actual needs.
5. International project financing services can be provided according to actual needs.
6. The water meter conforms international standards and certificates and can participate in international bidding .
7. The warranty period of the water meter can be extended according to the requirements of the water department.
8. Key customers and markets can provide localized service teams to achieve more efficient and direct on-site service requirements .
9. Support on-site installation, training guidance, etc.

15	In Hex Bolt	Stainless Steel	SS304

GATE VALVE
MODEL FIG01

FEATURE

- 100% tight sealing is achieved through EPDM covered wedge fully contacting the fusion bonded epoxy coated flow surface.
- The body and bonnet are manufactured from ductile iron castings. It is resistant to high tensile stress occurring in pipelines.
- Low operating torque due to plastic sliding guides on the wedge
- Maintenance-free and corrosion-resistant stem sealing
- With O-ring sealing
- Large conical stem hole in the wedge prevents stagnant water
- Wedge and body guide rails ensure stable operation
- Stainless steel stem with rolled threads for high strength & low operation torque.
- Inner and outer surfaces are coated with minimum 300 microns fusion bonded epoxy.
- Can be operated with actuator, gearbox, handwheel and extension spindle.
- The top of the shaft bearing and shaft nuts are made of brass. High precision machining enables low operation torques.
- Full bore characteristics without distruption of flow results in low pressure drops across the valve

FEATURE

- The position of the fire protection valve can be monitored with the use of the on-board tracking circuitry. This avoids damage that could be caused by the valve in a closed position during a possible fire.
- Full bore characteristics without distruption of flow results in low the valve.
- 100 % tight sealing is achieved through EPDM covered wedge fully contacting the fusion bonded Epoxy coated flow surface.
- The top of the shaft bearing and shaft nuts are made of brass. High precision machining enables low.
- Operation torques. Inner and outer surfaces are coated with minimum • Stanc 300 microns.
- Flanged end connections.
- Lightweight ductile iron body and bonnet.
- Lower operating torque, designed for a higher life cycle.

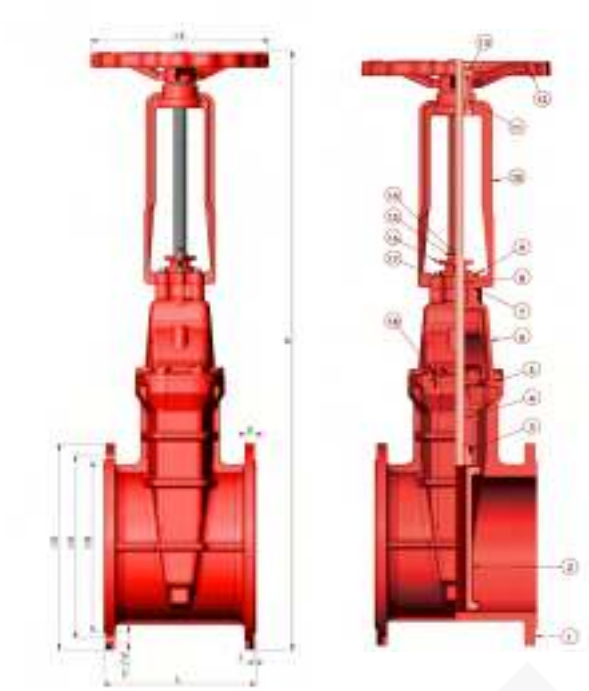

TEMPERATURE

- Maximum 70 °C

SCOPE OF APPLICATION

- Hot water lines
- Cold water lines
- Fire Application
- Power Plants
- Industry

SURGE PATICIPATING VALVE
MODEL FIG088

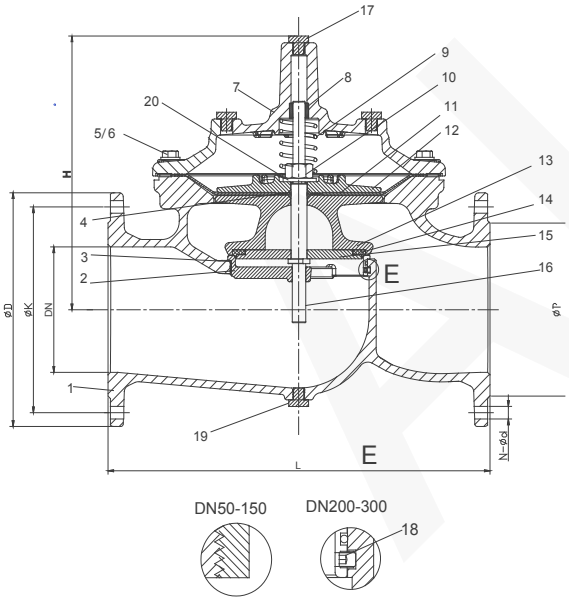

PRODUCTION STANDARDS

MODEL FIG088 I DN50 - DN300
PN10 - PN16

Design	EN-1074
Test	EN-12266-1, Class A
Flange	EN-1092-2, BS4504

FEATURES

- Simple and reliable design
- Easy installation and maintenance
- Low resistance and high flow capacity
- No slam operation
- Closes slowly To prevent subsequent surges

DELUGE VALVE
MODEL FIG12

PRODUCTION STANDARDS

MODEL FIG12 I DN50 - DN200
PN10 - PN16

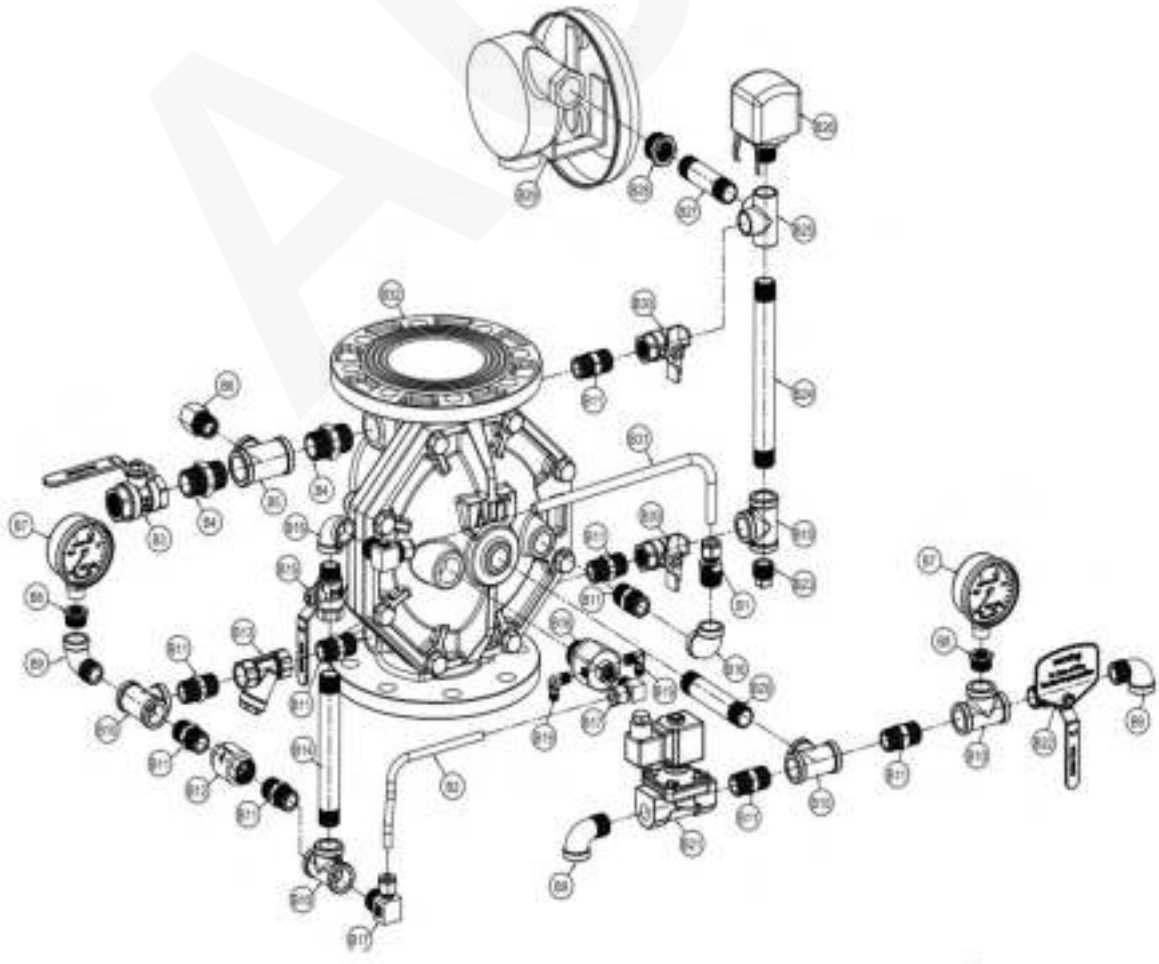

Connection	EN1092-2 ISO 7005-2
Face to Face	Flange x Flange
Pressure Class	PN 16

DESCRIPTION

- The AUT Model FIG 12 Deluge Valve DN50 thru DN200 (2" thru 8" inch) is a diaphragm type valve designed for vertical installation and for fire protection system service.
- They are used as "automatic water control valves" in deluge systems. When properly trimmed, the FIG 12 deluge valves are also able to provide actuation of fire alarms upon system operation.
- The diaphragm style design of the FIG 12 Deluge valve allows external resetting which provides for easy resetting of a deluge system without having to open a valve cover to manually reposition a clapper and / or latch mechanism.
- Simply repressurizing the diaphragm chamber resets the valve

DELUGE VALVE
MODEL FIG12

DELUGE VALVE

The FIG 12 Deluge valves are for vertical installation only, and are rated for use at a maximum service pressure of 16 Bar (232 PSI)
End connections are flange x flange, drilled per either EN…GB or ISO specifications shown in Figure 2. Valve trim port connections are available as ISO 7-1 threaded only. Components for the DN50 thru DN300 (2" thru 12" inch), Model FIG 12 Deluge Valves are shown in Figure 1.

Notice

- The model FIG 12 Deluge Valve with Electric Actuation Trim described here in must be installed and maintained in compliance with these documents, as well as with the appliable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.

DESCRIPTION

- The wet alarm valve is a kind of one-way valve which only allows water to flow into the sprinkler system iN one direction and drives the supporting parts to give an alarm under the specified pressure and flow. It is a kind of fixed fire extinguishing system which consists of water flow indicator, pressure switch and sprinkler head. The system all the year round with a certain pressure force of water in the pipe network, in the prolonged state bar work, when somewhere there is a fire protection area, area environment temperature, thermal sensitive element of sprinkler release, thus open nozzle jet, and the whole system will start automatically send alarm signal, to achieve the purpose of, put out the fire in fire alarm and fire control.
- Wet alarm valve group, according to" the 2nd part GB5135.2 sprinkler systems wet alarm valve, delayer, water alarm motor" standard design. It consists of wet alarm valve, pressure switch, delayer, and water alarm motor, compensation pipeline, alarm pipeline, drain pipeline and other piping composition.
- The wet alarm valve manufactured by our company is well-made and made of exquisite materials with the advantages of stable working performance, high fire extinguishing efficiency, sensitive operation, simple maintenance, and reliable use. It is widely used in various places where water is used for fire extinguishing and there are a variety of specifications to choose from.

1. Alarm ball valve (Open)
2. Drainage ball valve (Closed)
3. Test alarm valve (Closed)
