

## DELUGE VALVE MODEL FIG12

### PRODUCTION STANDARDS

**MODEL FIG12 | DN50 - DN200  
PN10 - PN16**

**Connection** EN1092-2 ISO 7005-2

**Face to Face** Flange x Flange

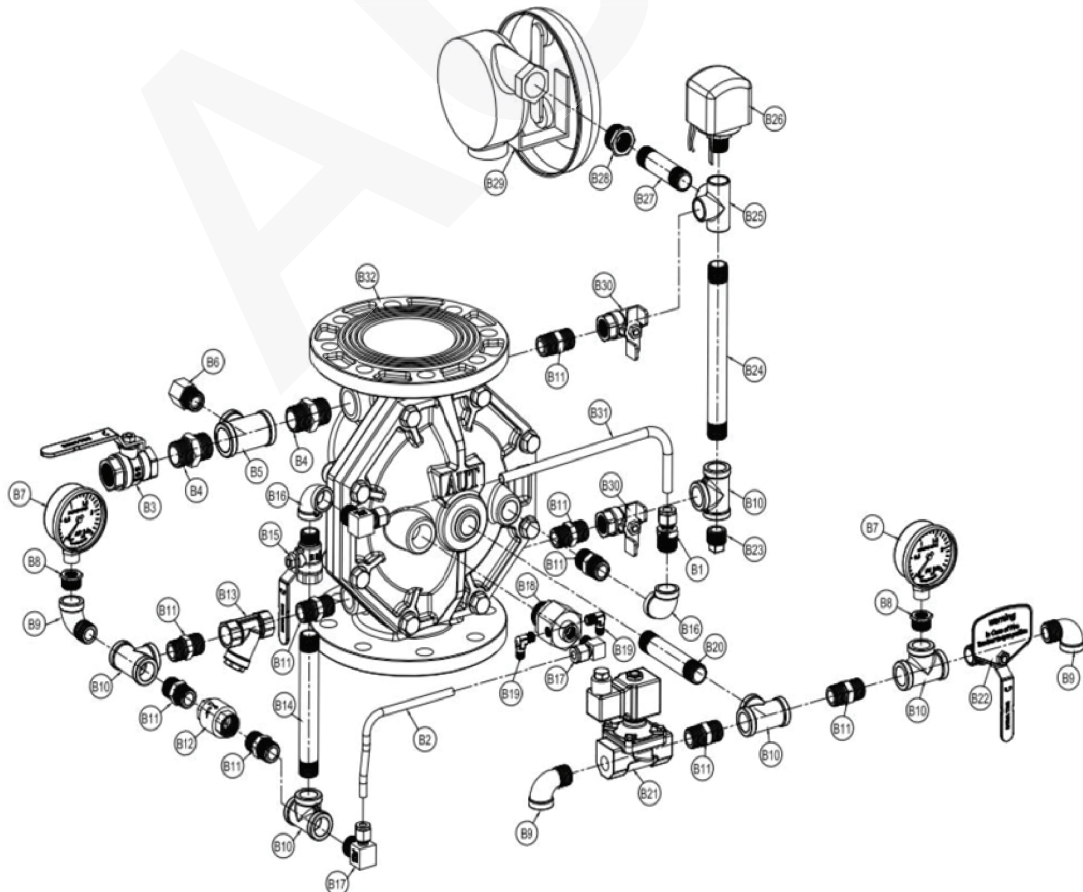

**Pressure Class** PN 16

### DESCRIPTION

- The AUT Model FIG 12 Deluge Valve DN50 thru DN200 (2" thru 8" inch) is a diaphragm type valve designed for vertical installation and for fire protection system service.
- They are used as "automatic water control valves" in deluge systems. When properly trimmed, the FIG 12 deluge valves are also able to provide actuation of fire alarms upon system operation.
- The diaphragm style design of the FIG 12 Deluge valve allows external resetting which provides for easy resetting of a deluge system without having to open a valve cover to manually reposition a clapper and / or latch mechanism.
- Simply repressurizing the diaphragm chamber resets the valve

### MATERIAL SELECTION

No	Items	Material
1	Valve Body	Ductile iron
2	Valve Cover	Ductile Iron
3	Diaphragm	Nylon Fabric, Reinforced, Natural Rubber
4	Spring	Stainless Steel
5	Spring Seat	Nylon
6	Hex Bolt	Stainless Steel
7	Flat Washer	Stainless Steel

# DELUGE VALVE MODEL FIG12

## DELUGE VALVE

The FIG 12 Deluge valves are for vertical installation only, and are rated for use at a maximum service pressure of 16 Bar (232 PSI)  
End connections are flange x flange, drilled per either EN...GB or ISO specifications shown in Figure 2. Valve trim port connections are available as ISO 7-1 threaded only. Components for the DN50 thru DN300 (2" thru 12" inch), Model FIG 12 Deluge Valves are shown in Figure 1.

### Notice

- The model FIG 12 Deluge Valve with Electric Actuation Trim described here in must be installed and maintained in compliance with these documents, as well as with the applicable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.
